⌄ Scroll down to continue ⌄ Share Pin it Tweet Share Email As one of the most widely sent files from person to person and business to business, the PDF is an essential staple in the digital world. While the files look neat and display well, editing them can be tricky without the right type of software. The new Free PDF to Word software allows you to turn any PDF document into the Word format so that you may start to edit it. This is extremely useful for organizations that still hire staff that are not as savvy as they would like. Using the software will allow anyone to quickly convert a PDF file to Word and the program does not even take up that much hard-drive space. Free PDF to Word – CNET Download (Windows) [Free PDF Solutions] Share Pin it Tweet Share Email At a GlanceThis free utility lets you view PDF files–and it takes up less space than Adobe Reader. Foxit Reader is a fast, free, lightweight alternative to Adobe Reader for opening and displaying PDF files. It's also feature-packed, though it lacks the print-to-PDF and conversion capabilities of fellow freebie Nitro PDF Reader. I've been using Foxit Reader since back in the day… The day when Adobe Reader had become a fat slob of a program that took forever to boot and load files. Adobe has improved greatly, but so has Foxit Reader. The latest version has a new look that mimics Microsoft Office 2007/2010 somewhat, and adds support for XML Form Architecture form filling, as well as Microsoft Active Directory Rights Management service. It also offers the ability to capture text, copy and paste it, though there's no wholesale export. I now use Nitro PDF Reader, because it offers print-to-PDF and creation abilities for free, but I'll be working Foxit back into the rotation simply because of its speed. It's perhaps twice as fast as Nitro at opening, and especially searching files, and time is money. Note: Foxit Reader 5 will install a toolbar and change your default search engine to Ask if you don't disable these options. –Jon L. By Greyson Ferguson i Creatas Images/Creatas/Getty Images Omniform is a free-to-use computer program that allows you to convert a variety of different word-processing formats. This means if you currently have a PDF or Word Perfect file, you can easily convert it over into a Word file. This allows you to take files from just about any program, convert them, then open the files in Word as if the document had been composed in the Microsoft program. Download and install Omniform if you do not currently have it installed on your computer. You can download it from OmniFormat.com. OmniFormat supports all Windows formats from Windows 95 to Windows 7. Launch the Omniform software you have installed on the computer. Wait for the program to completely open, then click "File" followed by "Open." Select the document you want to convert to Word. Select a save location for your soon-to-be Word document. There is a pull-down menu available on the main screen for you to do this. You can select any location on your computer or attached memory device (such as a flash drive or external hard drive). Select the ".doc" format from the list available through the format pull-down menu. .Doc is the Word file format. Click "Convert" and the document is converted into a Microsoft Word format. You can now easily open it up in Word and edit it as if you had created the file in the program. By Mitchell White If you have a particular picture in the Portable Document Format (PDF), and you want to turn it into a Word document, there's a simple way to do this without using any other software. Microsoft Word has the option to insert other files inside of a document. Doing this will convert the PDF file into Word format, enabling you to utilize Word features to alter it. Click on "Insert" on the menu bar. A submenu appears. Select "File." A browse window comes up. Select "All Files" as the file type. Browse through until you find your PDF picture, and double-click on it. It should appear as an object inside of the Word document. Highlight content in Excel you'd like to copy, press Ctrl+C to copy it, and press Ctrl+V within Word to paste your content. In Word, go to Insert > Object > Object, select Create from File, choose your Excel file, and select Insert. To convert entire files, use an online conversion tool to directly convert an Excel spreadsheet into a Word document. With Excel's spreadsheet power and Word's processing magic, they're a power duo for creating projects. Even though a direct conversion method doesn't exist, if you need to convert from Excel to a Word document, there are a few ways you can do so in Excel and Word 2019, 2016, and Excel and Word for Microsoft 365. The first method is the simplest, and you're probably already aware of the it. You can easily convert your work from Excel to Word by copying and pasting. While Excel does have an Export option, there's no built-in way to export to Word from within Excel. Instead, you need to use one of the methods described here to move data from an Excel document into a Word Document. To start, open the Excel document you want to copy from. Open the Word document you're pasting to. In the Excel document, select the content you want to copy. If you want the entire page, select the triangle icon in the upper left of your work. With the content selected, press Ctrl+C on your keyboard (Cmd+C for Mac users) to copy it. In the Word document, place your cursor where you want to paste your work. Use Ctrl+V (Cmd+V for Mac users) to paste. You can also use copy and paste to create a new table in Word. Simply create a Word table, select the data in Excel and then copy it directly into the new table you created. In contrast to copy and paste, inserting Excel as an object inserts a miniature version of your Excel document in Word, complete with multiple sheets and other features. With Excel and Word open, proceed to the steps to start converting. In Word, select Insert from the ribbon. Select the Insert tab and choose the Object icon in the toolbar. Select Text from File in the dialog box and locate your Excel file. Want your object to automatically update if you change the Excel spreadsheet? Select Options > Link to File. Select Insert in the bottom right corner of the dialog box to place the content. In Word, select Insert > Object > Object. Select the Create from File tab > Browse. Locate the file you want to insert. Select Insert. If you want to link it to a file, select the Link to File check box. Select OK. You can also use an online converter to convert Excel to Word. Locate an online converter by conducting a quick online search. Then upload your two separate documents and allow the converter to do the heavy lifting. When the process is complete, you can download your new document. Thanks for letting us know! Get the Latest Tech News Delivered Every Day Subscribe Tell us why!
